Collection Overview

Repository: National Air and Space Museum Archives

Title: Rockwell HiMAT RPRV Documentation

Date: 1976-1981

Identifier: NASM.1989.0059

Creator: Rockwell International

Extent: 5.68 Cubic feet ((1 slim legal document box) (5 records center boxes)

(2 flatboxes))

Language: English .

Administrative Information

Acquisition Information

NASA/Dryden FRC, Transfer, 1989, 1989-0059, unknown

Biographical / Historical

The Highly Maneuverable Aircraft Technology (HiMAT) program was established by the National Aeronautics and Space Administration (NASA) Dryden Flight Research Center at Edwards AFB, CA and the USAF Flight Dynamics Laboratory at Wright-Patterson AFB, OH to decrease the time needed to flight test advanced design technology by providing a low-cost, low-risk test bed vehicle. Following control technical development in 1975, NASA awarded a contract to Rockwell International for two HiMAT Remotely-Piloted Research Vehicles (RPRV). The Rockwell HiMAT consisted of a basic core vehicle containing the power plant, control, and telemetry systems and modular main wings, canard and tail surfaces, and engine intake and afterburner/exhaust structures to allow flight testing of alternate designs. The first of the HiMATs was delivered to NASA in March 1978 and the second in June, with the first free flight occurring in July 1979. The Rockwell HiMAT was controlled by a ground-based pilot through television, radar, and telemetry links to the vehicle with backup systems on chase aircraft and a self-righting system on the RPRV in the event of ground control loss. One HiMAT was donated to the National Air and Space Museum (NASM) and placed on display in May 1989.

Scope and Contents

This collection consists of documentation on the NASM HiMAT. The material includes correspondence, color photographs, test information, computer programs, printouts, punch tapes, and schematics.

General

Names and Subject Terms

This collection is indexed in the online catalog of the Smithsonian Institution under the following terms:

Subjects:

Aerodynamics Aeronautics

Aeronautics, Commercial Aeronautics, Military Airplanes -- Flight testing

Drone aircraft

HiMAT Remotely-Piloted Research Vehicles (RPRV) Highly Maneuverable Aircraft Technology (HiMAT)

Types of Materials:

Correspondence Photographs Punched cards Reports Software

Names:

Rockwell International

United States. National Aeronautics and Space Administration

Wright-Patterson Air Force Base (Ohio)

Wright-Patterson Air Force Base (Ohio). Flight Dynamics Laboratory
