Biographical / Historical

During the 1920s and 1930s there were proposals to help establish airways over the oceans. One proposal was seadromes (man-made platforms and facilities) which would be placed at strategic intervals across the North Atlantic and Pacific Oceans. In theory, these platforms would allow commercial transport aircraft to cross the oceans safely and profitably.

Scope and Contents

This is a 1930 commercial proposal, 'Seadrome Ocean Airways: Report covering the Development Program.' The report was written by Edward R. Armstrong and includes text, drawings, images, and maps.
