Historical Note

Science Service, a not-for-profit institution founded to increase and improve the public dissemination of scientific and technical information, began its work in 1921. Although initially intended as a news service, Science Service produced an extensive array of news features, radio programs, motion pictures, phonograph records, and demonstration kits and it also engaged in various educational, translation, and research activities. It later became Science Service, Inc., an organization that publishes *Science News* and promotes science education. On January 10, 2008 Science Service was renamed Society for Science & the Public (SSP).

Record Unit 7091 contains correspondence and other material related to Science Service, from just before its establishment through 1963, including the editorial correspondence of the first two directors and senior staff.

The inspiration for such an organization developed during conversations between newspaper publisher E.W. Scripps (1854-1926) and zoologist William E. Ritter (1856-1944), who headed the Scripps-funded oceanographic institute in California. "Document A - The American Society for the Dissemination of Science," dictated by E. W. Scripps on March 5, 1919 (see Box 1, Folder 1), declared that the "first aim of this [proposed] institution should be just the reverse of what is called propaganda." Scripps believed that it should not support partisan causes, including those of any particular scientific group or discipline, but should instead develop ways to "present facts in readable and interesting form..." (p. 3). Scripps and Ritter held meetings throughout the United States to solicit ideas and support from scientists. By 1920, they had concluded that the best way to improve the popularization of science would be to create an independent, non-commercial news service with close ties to, but not operated by, the scientific community. The scientists would lend credibility to the organization's work, help to ensure accuracy, and project an image of authority.

Scripps supplied an initial donation of \$30,000 per year from 1921 until his death in 1926. His will placed \$500,000 in trust for Science Service and provided a continuing endowment until the trust was dissolved in 1956.

Science Service did not provide all its services for free. Scripps believed that the news service would be more valued by its clients - and would better reflect their needs and professional standards - if it charged a fair price for its products. As a result, the history of the organization is one of continual innovation, as the staff developed and marketed new syndicated features, wrote articles and books for other publishers on commission, and re-wrote each basic news story for multiple markets.

From the beginning, Science Service was guided by a 15-member board of trustees composed of two groups: prominent scientists nominated by the National Academy of Sciences, American Association for the Advancement of Science, and Smithsonian Institution, and newspaper editors or executives nominated by the Scripps-Howard organization or the Scripps family trust. William E. Ritter served as the first president of the board of trustees. Such scientists as J. McKeen Cattell, Edwin G. Conklin, Harlow Shapley, and Leonard Carmichael (the seventh Secretary of the Smithsonian Institution) succeeded him over the next four decades.

During the summer of 1920, Ritter began negotiations with Edwin E. Slosson (1865-1929), a well-known chemist and popularizer. Slosson had taught at the University of Wyoming for thirteen years until moving to New York to become the literary editor of *The Independent*. He began work as the head of Science Service in January 1921.

The first public announcement of the creation of Science Service appeared in *Science*, April 8, 1921, pp. 321-323. The first meeting of the trustees was held on May 20, 1921; the Science Service trust was set up July 22, 1921; and the not-for-profit organization was incorporated in the state of Delaware on November 1, 1921.

In 1921, Howard Wheeler, former editor of the *San Francisco Daily News*, was hired as the business manager. Watson Davis (1896-1967), a civil engineer who had been working at the National Bureau of Standards and writing science features for a Washington, D.C., newspaper, was hired as principal writer. In 1923, Wheeler was fired; Slosson (whose title had been "Editor") was named Director; and Davis was promoted to managing editor.

Throughout the 1920s, Davis built the news service through the "Daily Science News Bulletin," which later became the syndicated "Daily Mail Report" sold to newspapers around the country. He developed a local radio program and script service ("Science News of the Week"), coordinated a project to produce phonograph records, and assembled a skilled staff to handle reporting, circulation, production, sales, advertising, and accounting. Davis also edited the organization's most successful product, *Science News Letter* (titled *Science News Bulletin*, April 2, 1921-March 1922, and *Science News-Letter*, March 1922-October 1930).

After Slosson's death on October 15, 1929, the trustees favored replacing him with another scientist. Davis lobbied for the position but remained as managing editor until he was finally appointed director in 1933. He guided the organization until his retirement in 1966.

From 1921-1924, the editorial offices were located in offices rented by the National Academy of Sciences (NAS) in Washington. When the NAS moved to its own building at 2101 Constitution Avenue, N.W., in April 1924, Science Service acquired space there. As World War II began, space became precious at the NAS headquarters. In spring 1941, Science Service purchased its own building at 1719 N Street, N.W., to house its expanding operations and staff.

Between 1921-1963, Davis and senior writers such as Frank Thone, James Stokley, Jane Stafford, and Marjorie Van de Water interviewed hundreds of scientists and engineers, and wrote thousands of articles, often maintaining a lively correspondence with their sources. Thone, a botanist with a Ph.D. from the University of Chicago, worked for the organization from 1924 until his death in 1949, covering both the Scopes trial and the atomic tests at Bikini Atoll; astronomer Stokley joined the group in 1925 and continued to write the "Star Map" feature even after he went to work for the Franklin Institute and for General Electric. Stafford, one of the founding members of the National Association of Science Writers, covered medicine and biology for Science Service from 1928 to 1956. Van de Water covered psychology and related topics from 1929 through the 1960s. Other members of the Davis family also assisted in the operations, including Watson's wife, the chemist Helen Miles Davis (1896-1957), who edited *Chemistry* from 1944, when it was acquired by Science Service, until shortly before her death. Watson's brother Fremont Davis served as the organization's photographer.

Science Service also depended on an extensive network of part-time correspondents, or "stringers," in the United States, Europe, and Asia, to provide information and photographs. Most of these contributors were graduate students, young professors, or schoolteachers. By the mid-1930s, Science Service was dispensing small fees (under \$10.00) for over 500 short news items and illustrations annually. The staff was also answering hundreds of letters each year from readers of all age who were curious about science in general or had specific questions about a subject mentioned in the news. The correspondence with these people afford a rich resource for social and cultural historians.

In addition to sending its writers to participate in expeditions, Science Service established projects to collect scientific data, such as seismological information and ursigrams, and to compile weekly astronomical and meteorological charts. They also initiated a "Scientific Minute Men" project in which a network of archeologists and other scientists were authorized to wire Science Service at no charge.

The activities of the staff and organization were wide-ranging and reflect the breadth of science and scientific concerns during the twentieth century. Slosson and Davis were involved extensively with groups like the American Association for the Advancement of Science, British Association for the Advancement of Science, Sigma Xi, and American Eugenics Society, and the staff writers covered dozens of scientific meetings every year, sometimes serving as officers of those associations. Davis was a major participant in the National Inventors Council and served on dozens of advisory committees for scientific laboratories and universities, and national and international government agencies. With Alexander Gode, Davis worked to promote acceptance of Interlingua, an international scientific language. One of the organization's most lasting contributions was to science education, through its sponsorship of Science Clubs of America, National Science Fairs, the Science Talent Search, and informal teaching units called "THINGS of Science." Science Service also sponsored early innovation in microphotography, established a Documentation Division and a Bibliofilm Service, and helped to found the American Documentation Institute.

For the first four decades of its existence, however, the central mission remained science journalism. As Davis wrote in 1960, Science Service strived from the beginning to convince both publishers and scientists that "science is news, good news, news that can compete, from a circulation standpoint, with crime, politics, human comedy and pathos, and the conventional array of news and features" and that science "could be written popularly so as to be accurate in fact and implication and yet be good reading in newspaper columns" (Watson Davis, "The Rise of Science Understanding," 1960, Box 368, Folder 2). These records will help historians to understand better the processes of negotiation, adjustment, and innovation which created that news. - Marcel C. LaFollette

Introduction

The bulk of this collection was processed by Jane Livermore, a devoted and tireless volunteer in the Smithsonian Institution Archives between 1995 and 2004. Livermore is a former Science Service employee. She worked in the organization's library, oversaw the educational project "THINGS of Science," and served as Assistant to the Director. The Archives wishes to thank Ms. Livermore for her excellent work on this collection.

Many others have assisted on this project. SIA also thanks Helen Shade, Program Assistant in the Archives Division, who helped create folder listings for many of the later series in this record unit. SIA is especially indebted to historian Marcel C. LaFollette, who has conducted extensive research in this collection, written a historical summary for this guide, and whose findings in these records have generated excitement both within the Archives and among professional colleagues. SIA could not have created this finding aid without Dr. LaFollette's contributions, annotations, and insights.

Descriptive Entry

Record Unit 7091 contains: correspondence and telegrams; drafts and final versions of articles, books, and radio scripts; staff notes and interoffice correspondence; published material such as pamphlets and news clippings; photographs and drawings; advertisements and trade literature; and other ephemera related to science news coverage and publishing.

This record unit is one of the largest single collections in the Smithsonian Institution Archives (SIA). There are several related collections in SIA (see Accessions 01-122, 01-243, 04-042, 90-068, 90-105, 93-019, and 97-020 (see also the National Air and Space Museum; the National Museum of American History, including the Archives Center and collections in agriculture and mining, chemistry, costume, engineering, electricity, medical sciences, military history, modern physics, and photographic history; the National Museum of Natural History; and the National Portrait Gallery).

The arrangement of RU 7091 reflects the eclectic nature of an active news organization that was reactive to current events and discoveries, in touch with a worldwide network of researchers, and concerned about accuracy. In 1960, the organization's educational director described their records in this way: "... Science Service has been distributing science news for 40 years. During that time we have been in touch with practically all the major scientists and the developments which were taking place. Since all of our material has to have full authentication, we have built up a mass of files" (Letter from Frederick A. Indorf to Joseph C. Shipman, October 24, 1960, Box 350, Folder 13). This "mass of files" also included two extensive "morgues" that contained back-up material, information, and photographs that could be used in future stories. The informational "morgue" files were organized according to the Library of Congress classification scheme. A few of these files are in RU 7091 (see Series 7); more extensive collections are located in SIA Accessions 01-122, 01-243, 90-068, 90-105, and 93-019 and in curatorial collections in Smithsonian Institution museums. A major portion of the biographical "morgue," containing photographs and information about scientists, engineers, and other public figures, is in SIA Accession 90-105.

Editorial correspondence with news sources was usually filed in the general correspondence files of Series 1 - 5. Some was also filed with the resulting story for the *Daily Mail Report* (see Series 8) or with other back-up in a morgue file. Correspondence with scientists and engineers who appeared on the Science Service radio programs may also be found in the radio program files (see Series 10). Audiotapes of some broadcasts are in Series 20, SIA Accession 04-042, and in the NMAH Archives Center collection (Call # ACNNMAH0223).

Most folders in RU 7091 retain the original folder's title. This finding aid uses edited descriptions and additional notes to assist researchers in navigating through the record unit. Most correspondence was filed by the date and the last name of correspondent, but documents were sometimes filed alphabetically according to a topic or by the name of an individual's affiliation.

The topics covered in RU 7091 include all fields of science and engineering, theoretical physics to bridge construction techniques, wildlife conservation to plastics and paints. There is considerable attention to social and economic issues and to military research and censorship during World War II. The staff visited museums, observatories, industrial test facilities, and military installations; they reported on most of the major scientific events of the time, including the Scopes trial. During the 1930s and 1940s, Science Service purchased news and photographs from official U.S.S.R. news offices and also supported efforts to interact with Soviet scientists. There were attempts to establish branch operations in England and France and to encourage science popularization and education in Mexico.

Correspondents include trustees, news sources, publishers, writers, and business clients. Most inquiries from readers or listeners were answered and filed with regular editorial correspondence. "Taffy" is the term Science Service used for complimentary correspondence; it is often filed separately. Series 5 also contains manuscripts and letters from scientists and non-scientists who were convinced they had discovered, proved, or understood a new scientific principle or insight - or else could save humanity from foreseeable destruction.

Frequent correspondents among the trustees included: C. G. Abbot, Edward U. Condon, Rene J. Dubos, Frank R. Ford, George Ellery Hale, Ross G. Harrison, Harrison E. Howe, W. H. Howell, Vernon Kellogg, Karl Lark-Horovitz, D. T. MacDougal, Kirtley F. Mather, John C. Merriam, Robert A. Millikan, Raymond

Pearl, Marlen E. Pew, Michael I. Pupin, I. I. Rabi, Charles Edward Scripps, Robert P. Scripps, Paul B. Sears, Thomas L. Sidlo, Harry L. Smithton, Mark Sullivan, Warren S. Thompson, Henry B. Ward, Alexander Wetmore, David White, William Allen White, and Robert M. Yerkes.

Other notable writers, scientists, and public figures include: William Beebe, Hans A. Bethe, Charles Bittinger, Howard W. Blakeslee, Edwin G. Boring, Bart J. Bok, Gregory and Marjorie Breit, P. W. Bridgman, Wilfred Swancourt Bronson, Rachel Carson, George Washington Carver, Morris L. Cooke, Clarence Darrow, Frances Densmore, Thomas A. Edison, Enrico Fermi, Henry Field, George Gamow, Eugene Garfield, Robert H. Goddard, Peter C. Goldmark, Hamilton Holt, J. Edgar Hoover, Julian S. Huxley, Louis M. Lyons, Margaret Mead, Merrill Moore, Edward R. Murrow, H. H. Nininger, Henry Fairfield Osborn, Gifford Pinchot, James A. Reyniers, J. B. Rhine, Walter Orr Roberts, M. Lincoln Schuster, John T. Scopes, Glenn T. Seaborg, Gilbert Seldes, Elizabeth Sidney Semmens, Upton Sinclair, Otto Struve, Elihu Thomson, Harold C. Urey, Mark Van Doren, Selman A. Waksman, Henry A. Wallace, Warren Weaver, H. G. Wells, and Gaylord Wilshire.

RU 7091 contains extensive records of the transactions with temporary correspondents and photographers, notes on the article titles and amounts paid, as well as correspondence discussing particular scientific events and, during the 1930s and 1940s, the situation in Europe. Among the active European correspondents were Maxim Bing in Switzerland, Victor Cofman in England, and Theodor G. Ahrens, Hans F. Kutschbach, and Gabrielle Rabel in Germany.

Researchers interested in the history of American publishing, journalism, advertising, and public relations will find extensive correspondence with professionals in those fields. Newspaper Enterprise Association, or "NEA Service," was a news syndicate established by the Scripps organization in 1909, to which Science Service sold articles and feature series. They also marketed articles and photographs to publications like *Life* and *Reader's Digest*. There is considerable correspondence with the editors about topic selection and why particular stories were rejected.

Science Service staff used special abbreviations in their interoffice correspondence. Starting in the 1930s, small name and date stamps were also used to record or acknowledge all correspondence and notes. Abbreviations were written in all capital letters as well as in initial cap form (e.g., Watson Davis was "WD" as well as Wd"). Here is a partial list of abbreviations that appear frequently in RU 7091:

ACM = A. C. Monahan

An = Anne Shiveley, secretary to Watson Davis

Ba = Howard Bandy, treasurer

Be = Miriam Bender, office staff

DGL = Donald G. Loomis, assistant treasurer

Do = Dorothy Reynolds, secretary to Watson Davis

Ed = Emily C. Davis (sometimes written as "ECD")

En = Leonard Engel

Ew = Ann Ewing

Fa = Bob Farr

FD = Fremont Davis

FI = Margaret Fleming

Fr = Violet Frye

Gi = Minna Gill, librarian

Hd = Helen Miles Davis

Hj = Hallie Jenkins, sales manager

Ho = Janet Howard

HW = Howard Wheeler, business manager

JWY = J. W. Young

Js = James Stokley

KI = Fred Kline, list room

Kr = Joseph Kraus, science youth programs

Md = Marjorie MacDill (Breit); in 1928, Jane Stafford became the medical editor and used these initials from 1928-1936

Mg = Mary McGrath, secretary to Watson Davis

MI = Bernice Maldondo

Mm = Martha G. Morrow

Mn = Minna Hewes

Mo = Morton Mott-Smith

Ot = Frances Ottemiller

Pd = Phillippa Duckworth, secretary to E. E. Slosson

Ps = Page Secrest

Pt = Robert Potter

Ri = William E. Ritter

RLI = Ronald L. Ives, photograph editor

RNF = Robert N. Farr

Ro = Ron Ross

SI = E. E. Slosson

St = Jane Stafford, after 1936

Th = Frank Thone

Vn = Marjorie Van de Water

Wd = Watson Davis

We = Margaret Weil

Wi = Austin Winant

Interoffice correspondence in the 1920s also used these abbreviations: Bk = bookkeeper; Cr = circulation; FI = File; Lb = library or library files; Mr = mailroom; Rt = retail files; Sa = sales department; Tp = typing department; Wb = wastebasket.

Series 4: BUSINESS CORRESPONDENCE OF SCIENCE SERVICE, 1922-1925.

Note: This series includes the correspondence of Howard Wheeler, when he served as Science Service business manager from 1921-1923, and other business and client correspondence through 1925. The business manager's correspondence for 1921 is filed with the director's correspondence in Series 2. Most of Science Service's financial and business records for years after 1925 were not transferred to the Smithsonian Institution Archives, but there is considerable business correspondence within Series 5, especially for the years when Watson Davis served as managing editor.

Series 7: MISCELLANEOUS SCIENCE SERVICE STAFF FILES ON PHYSICS, ASTRONOMY, AND ENGINEERING, 1942-1958.

Note: Some of these files (Box 371, folders 1 - 19 and 21) are the records of Science Service staff writer Ann Ewing, who covered physics and astronomy in the 1950s. There are also files that appear to have been part of the Science Service "morgue" files for topics in physics, astronomy, engineering, and home construction.

Series 8: *DAILY MAIL REPORT*, 1932-1964.

Note: This series contains background material, edited drafts, and final versions of the *Daily Mail Report* produced by Science Service, 1932-1964. Files are incomplete and represent a sample preserved in the 1970s from almost 10,000 days of coverage extending over three decades.

On five days a week, Science Service supplied a *Daily Mail Report* to its newspaper subscribers. Each day's mailing contained four to eight short news articles. The dates on the folders refer to the day on which Science Service mailed the report, not to the suggested release date or to the date on which subscribers may have eventually published any particular item.

These records provide a glimpse of typical subjects and approaches for science news of the time. They also suggest how Science Service acquired many of its stories. Files include such material as reporters' interview notes; copies of scientific and engineering journal articles; speeches and press releases; correspondence with sources; and occasional complaints about accuracy, along with the writer's response. Representative topics include: the Dust Bowl of the 1930s, Soviet science, wartime research in medicine and engineering, advances in medicine and dentistry, and electronics and computing.

Researchers may find this series useful both for analysis of reports on particular topics or subject areas (e.g., pesticides, aviation, pharmacology, or archeology) and changes in news writing techniques.

Series 9: ROCKEFELLER FOUNDATION SURVEY, 1938-1939.

Note: In June 1938, the Rockefeller Foundation sponsored a conference in Rye, New York, on the "interpretation of the natural sciences for the general public." Watson Davis, Director of Science Service, was one of the invited participants (transcripts of that conference are in Series 9, Box 382, Folders 3 and 4). After the conference, John Marshall, Assistant Director for Humanities at the Rockefeller Foundation, arranged for Science Service to conduct a follow-up survey for \$2000. This project ran from September 1938 to January 1939 and attempted to measure how science was then being presented to the public in newspapers, magazines, radio, film, and museum exhibits. The report (see Series 9, Box 382, Folder 5) was delivered to the Rockefeller Foundation in February 1939 but never published; it was disseminated officially only within the Rockefeller Foundation and to Science Service trustees.

Series 9 contains four boxes of material related to the survey: (a) copies of the original draft and final version of the report; (b) correspondence with the sponsor and media contacts; (c) coding sheets and tabulations of the analyses of newspaper, magazine, book, and movie content; and (d) articles, reports, movie press books, postcards, and other material consulted during the project.

Series 10: RADIO PROGRAMS OF SCIENCE SERVICE - "ADVENTURES IN SCIENCE" AND "SCIENCE NEWS OF THE WEEK," 1935-1958.

Note: This series consists of scripts, correspondence, and other material relating to Science Service radio programs on the Columbia Broadcasting System (CBS), 1935-1958, and other Science Service broadcasting activities. Folders often contain both draft and final scripts together with correspondence and background material. For audio recordings see Series 20: "Adventures In Science" Recordings, 1951-1959.

Beginning in the 1920s, Science Service staff wrote 15-minute radio scripts ("Science Service Talks" and "Science News of the Week") which were mailed every week to several dozen U.S. radio stations and then read on the air by local announcers or scientists. By the early 1930s, they were also producing a weekly live-broadcast program for CBS, which eventually featured interviews of scientists. CBS and Science Service renamed these programs "Adventures in Science" beginning with the May 6, 1938, broadcast. Between May 6 and September 30, 1938, CBS controlled all writing and production and CBS staff member Paul Woodbridge hosted the program until it was cancelled September 30, 1938. "Adventures in Science" resumed as a weekly program on CBS on January 5, 1939, with a format of brief news bulletins followed by an interview conducted by Watson Davis. Programs were suspended during World War II and during football seasons in the 1940s and early 1950s. CBS cancelled "Adventures in Science" in December 1958.

Series 10 contains primarily records for "Science News of the Week," 1935-1938, and "Adventures in Science," 1938-1958. There are also scripts for other radio programs on which Watson Davis appeared.

During the 1930s and 1940s, listeners could request either a copy of the script or a special supplementary bulletin. Box 388 contains almost a complete set of mimeographed scripts and bulletins for the broadcasts in 1939 and 1940. Individual broadcast folders in other boxes may contain an annotated script ("as delivered") with any changes made immediately before or during the broadcast. By the 1950s, interviews were ad-libbed and no formal script was prepared beforehand.

Files also contain correspondence from CBS employees such as Lyman Bryson, Sterling Fisher, Leon Levine, Helen J. Sioussant, and Paul Woodbridge.

Series 10 remains in the order the files were received upon transfer to the Smithsonian Institution Archives. Folders, especially for the later broadcasts, are therefore not necessarily in chronological order. A few folders contain material related to cancelled or planned broadcasts. The finding aid lists the broadcast date, guest(s), and either the program title or general topic.

Folder 1 Scripts and correspondence for broadcasts August 5, 12, 19, and 26 and September 2, 9, and 16, 1938. The August 19, 1938, broadcast was transmitted from Cambridge, England, and introduced by journalist Edward R. Murrow; Watson Davis interviewed Lord Rayleigh and Sir Richard Gregory in conjunction with a British Association for the Advancement of Science meeting. On September 16, 1938, CBS staff member Paul Woodbridge interviewed Harold C. Urey and, on September 23, 1938, Perrin Long.

Series 16: LATIN AMERICAN TRANSLATIONS, 1941-1952.

Note: This series documents a project, funded during the 1940s by the Coordinator of Inter-American Affairs, U.S. Department of State, through the American Council of Learned Societies and Science Service. The goal was to assist the translation of books into Spanish and Portuguese and to subsidize their publication in Latin America. Files contain notes and correspondence about books under consideration and some of those adopted for the program. Frequent correspondents in this series include Christine Buechner, Executive Secretary of the Committee on Inter-American Scientific Publication.

Series 18: AMERICAN DOCUMENTATION INSTITUTE, 1922-1954.

Note: This series consists of materials relating to the non-profit American Documentation Institute (ADI) and its predecessor organizations. In 1926, Science Service established a Documentation Division to explore means of disseminating scientific information by voice, print, and film, and it began experimenting with microphotographic processes and equipment (see "Plan for Film Record Prepared by Science Service," June 15, 1926, Box 436, Folder 12). In 1934, they established a Bibliofilm Service to microfilm technical material on demand and began a cooperative project with the U.S. Department of Agriculture (USDA) (see agreement in Box 172, Folder 13). ADI was incorporated in 1937 as a non-profit corporation with members nominated by several dozen scholarly and scientific groups; in 1941, ADI's Bibliofilm Service operations were transferred permanently to USDA. ADI also established an Oriental Science Literature Service to translate Japanese and Chinese scientific and medical literature and, during 1941-1942, published *Far Eastern Science Bulletin*. Series 18 contains correspondence of librarians, archivists, scientists, publishers, and government officials in the United States and other countries concerned about the problems created by the rapid expansion of scientific and technical literature.

Series 19: PUBLICATIONS AND LECTURES OF WATSON DAVIS, 1922-1952.

Note: Drafts and final versions of speeches and articles by Watson Davis; background material for lectures; correspondence on related topics; proofs and correspondence for *Atomic Bombing: How to Protect Yourself* (1950), written by Davis and other Science Service staff members.

Box 443	
Box 443 of 459	Folder 1 History of Science in America, 1922-1933. Material used in lectures and articles; includes articles by J. McKeen Cattell, Austin H. Clark, and Harrison P. Eddy.
Box 443 of 459	Folder 2 "The Public's Way to Science," American Association of Agricultural College Editors, July 12, 1938. Copies of speech.
Box 443 of 459	Folder 3 "Emotionalism in Science," Paris, July 1949. Watson Davis's interpretation of a Frank J. Malina drawing.
Box 443 of 459	Folder 4 Articles by Watson Davis, 1933-1944
Box 443 of 459	Folder 5 Science Service phonograph records project, 1940. Includes advertisements and analysis of earlier record project.
Box 443 of 459	Folder 6 Classics of Science - future schedule, 1929
Box 443 of 459	Folder 7 Mobilization of Scientific Knowledge, Princeton University Press, 1942. Correspondents include Datus C. Smith, Jr.
Box 443 of 459	Folder 8 Material for general talks on current science, ca. 1933-1941. Includes survey of Daily Science News Bulletin clients, February 12 - March 19, 1927, and 1933 version of "Stories To Be Careful Of."
Box 443 of 459	Folder 9 Material for lectures, 1926-1934. Correspondents include Marlen E. Pew and William E. Ritter; includes articles by E. E. Slosson and discussion of press attitudes to evolution.
Box 443 of 459	Folder 10 Addresses and general material, 1927-1950. Includes jokes and anecdotes for lectures; "The Popularization of Science" (speech to American Institute of New York, February 4, 1937); "What Shall We Do?" (speech to American Association of Scientific Workers, November 25, 1940); 1941 "THINGS of Science" fossil mailing; Marjorie Van de Water's 1941 series on "Moral Defense."
Box 443 of 459	Folder 11 Lectures about microfilm, 1937-1938
Box 443 of 459	Folder 12 "Scientifically Speaking," 1936. Columns by Watson Davis.
Box 443 of 459	Folder 13 Lectures on Science Service, 1926-1930. Includes comparative analysis of content in nine psychology journals, 1919 to 1927; "Scientific Horoscope" for March 31, 1926.

Box 443 of 459	Folder 14 Atomic Bombing: How to Protect Yourself, 1950. Correspondents include Louise C. Guthman; includes book contract, advertisements, and jacket; government pamphlets about how to survive an atomic attack, and copy of June 1950 series "Our Atomic Future."
Box 443 of 459	Folder 15 Golf, 1927-1944. Correspondents include Walter P. White; includes photograph of White and drafts of White's proposed series in 1927 about the science of golf; includes broadside advertisements for other syndicated golf series.
Box 443 of 459	Folder 16 Atomic Bombing: How to Protect Yourself, 1950. Includes galleys and page proofs for the book by Science Service staff.
Box 443 of 459	Folder 17 Atomic Bombing: How to Protect Yourself, 1950. Includes correspondence and file copy.
Box 443 of 459	Folder 18 W. H. Wise and Company, Inc., 1939-1945. Federal Trade Commission reports about the publisher of the atomic bombing book.
Box 444	
Box 444 of 459	Folder 1 Atomic Bombing: How to Protect Yourself, part 1 of 2. Includes original manuscript and a copy of United States Civil Defense.
Box 444 of 459	Folder 2 Atomic Bombing: How to Protect Yourself, part 2 of 2.
Box 444 of 459	Folder 3 Atomic Bombing: How to Protect Yourself, 1950. Correspondents include John A. DeChant; includes checked copy of manuscript.
Box 444 of 459	Folder 4 Articles, 1949-1950. Correspondents include Hiram Haydn; includes draft and correspondence relating to "The Human Factor in Our Civilization."
Box 444 of 459	Folder 5 "The Human Factor in Our Civilization," American Scholar, Winter 1950-1951
Box 444 of 459	Folder 6 "The Search for Talent in Science," in The Gifted Child, 1950, edited by Paul A. Witty
Box 444 of 459	Folder 7 Mortar Board talk at George Washington University, February 16, 1950
Box 444 of 459	Folder 8 Eastern High School Reunion, Washington, D.C., April 26, 1950
Box 444 of 459	Folder 9 Career Conference, Anacostia High School, Washington, D.C., May 2, 1950
Box 444 of 459	Folder 10 "Microfilms, Their Economic Application to Business and Industry," American Society of Mechanical Engineers, May 4, 1950

Box 444 of 459	Folder 11 Latin American Trainee Conference, Pan American Union, May 10-12, 1950
Box 444 of 459	Folder 12 "Science and Society," dedication of Germ-Free Life Laboratory, LOBUND Institute, Notre Dame University, June 22, 1950. Correspondents include James A. Reyniers.
Box 444 of 459	Folder 13 "Telling the World about Biology," AIBS meeting, Columbus, Ohio, September 13, 1950
Box 444 of 459	Folder 14 "The Art of Making Scientific News Readable," American Association of Dental Editors, Atlantic City, October 28, 1950
Box 444 of 459	Folder 15 "Contribution of Science and Technology to Peace," Colgate University, February 8, 1951
Box 444 of 459	Folder 16 Washington Science Fair, April 18, 1951
Box 444 of 459	Folder 17 "From Now On," Annual Educational Awards Meeting, American Chemical Society, Pittsburgh Section, May 17, 1951
Box 444 of 459	Folder 18 Material for UNESCO National Committee on Teaching for Science and Dissemination of Science, May 19, 1952
Box 444 of 459	Folder 19 "A Plea for Chemical Literacy," symposium on college and high school chemistry, American Chemical Society, New York, September 4, 1951. Speech by Watson and Helen Miles Davis.
Box 444 of 459	Folder 20 Description of Jackson Laboratory educational projects, science teachers meeting, Detroit, Michigan, November 13, 1951. Includes proofs of "Project Mouse," materials for science clubs participating in the "Wild Mouse Hunt," and complete set of the "From Now On" mailing.
Box 444 of 459	Folder 21 Popular Science Monthly, December 1951. Davis was interviewed for article; also includes copy of Japanese edition of magazine.

Series 20: "ADVENTURES IN SCIENCE" RECORDINGS, 1951-1959.

Note: This series consists of audiotape recordings and phonograph transcriptions of "Adventures in Science" radio broadcasts in the 1950s. By 1952, most programs did not have prepared scripts for the interview (see Series 10 for the surviving records of programs from 1935-1958). Each entry in Series 20 lists when a taped program was broadcast (if known) and either the type of program or the name of guest interviewed.

Box 447

Box 447 of 459 Tape 1 Broadcast January 25, 1958. Thomas M. Rivers.

Box 447 of 459 Tape 2 Broadcast June 22, 1957. Leone N. Claman.

Box 447 of 459 Tape 3 Broadcast June 1, 1957. Melville H. Manson.

Box 447 of 459 Tape 4 Broadcast April 27, 1957. R. R. Williams

Box 447 of 459 Tape 5 Broadcast March 30, 1957. A.R.P. Walker.

Box 447 of 459 Tape 6 Broadcast April 6, 1957. Genevieve Stearns

Box 448

Box 448 of 459 Tape 1 Broadcast April 13, 1957. Margaret Lyman, discussing child care; outside of tape is mislabeled as "Leading Questions 8/2/56."

Box 448 of 459 Tape 2 Broadcast March 9, 1957. Henry Dolger; "Diabetes Today"; outside of tape is mislabeled as "Face the Nation 2/27/55."

Box 448 of 459 Tape 3 Broadcast March 16, 1957. Bernardo A. Houssay; "Medicine in South America."

Box 448 of 459 Tape 4 Broadcast March 23, 1957. Frederick J. Stare.

Box 448 of 459 Tape 5 Broadcast August 2, 1958; Stanley F. Reed.

Box 448 of 459 Tape 6 Broadcast July 19, 1958. Maurice M. Shapiro.

Box 449

Box 449 of 459 Tape 1 Broadcast August 14, 1954. Frank Fremont-Smith.

Box 449 of 459 Tape 2 Broadcast June 29, 1957. Igal Talmi.

Box 449 of 459 Tape 3 Broadcast July 12, 1958. William M. Thames

Box 449 of 459 Tape 4 Broadcast July 19, 1958. Maurice M. Shapiro.

Box 449 of 459	Tape 5 Broadcast December 20, 1958. "Review of the Year" by Watson Davis.
Box 449 of 459	Tape 6 Broadcast May 11, 1957. John F. W. King.
Box 449 of 459	Tape 7 Broadcast June 8, 1957. Frank Howard.
Box 449 of 459	Tape 8 Broadcast December 27, 1958. "Science Advances for 1959" by Watson Davis.
Box 449 of 459	Tape 9 Broadcast April 14, 1956. Wade Weaver.
Box 449 of 459	Tape 10 Broadcast June 9, 1956. Renato Contini.

Series 21: KEYSTONE SCIENCE SERVICE, 1935-1936.

Note: "Keystone Science Service" was a Science Service project intended to provide a "new type of science coverage" targeted to a particular region and which operated ca. 1935-1936. It involved coordinating news perceived to be of special interest to Pennsylvania readers and inviting scientists in Pennsylvania to contribute short articles on topics related to the state. Series 21 contains samples of the drafts and final versions of the news service.
