Historical Note

Angeline Myra Keen (1905-1986) was a long-time member of the faculty of Stanford University. Although her academic training was in psychology, she became an expert in paleontology, and more particularly in malacology, the branch of zoology that deals with mollusks. She produced a large body of popular and scholarly work, taught many students, and was widely respected in her field.

After graduating from Colorado College (1930), Myra Keen and her mother moved to Stanford, where Keen took her M.A. in 1931, and then to the University of California at Berkeley, from which she received her doctorate in 1934. There were few jobs available in her field, so she took a volunteer job working on shells at Stanford. There the paleontologist Hubert Gregory Schenck encouraged her to study in that field, especially malacology. Keen spent the remainder of her career at Stanford. She belatedly became an assistant professor in 1954, an associate professor in 1960 and, in 1965, a full professor. At that time she was one of only three women so employed in the scientific disciplines at Stanford.

Keen undertook extensive field work on the west coast of America, as far south as Peru. She published her finest work in 1958, *The Shells of Tropical West America: Marine Mollusks from Lower California to Colombia*.

Professor Keen was active in many professional societies. She served as president of the American Malacological Union in 1948; in 1949, as a member of the Paleontological Society and chairman of the Pacific Coast Section. In 1970 she was chairman of the Western Malacological Union. She also served as chairman of the Committee on Nomenclature of the Society of Systematic Zoology.

Myra Keen received many honors in recognition of her accomplishments. She was a member of Phi Beta Kappa; was made a Guggenheim Fellow in 1964; and, in 1979, became the first woman to receive the Fellows' Medal of the California Academy of Sciences. In 1975 Emperor Hirohito of Japan, himself a noted

student of shells, asked to meet Keen on his visit to the United States, and they discussed the molluscan faunas of Japan and northwestern North America.

Professor Keen was an individual of quiet temper but strong convictions. A devoted pacifist, she joined the Religious Society of Friends in 1964. She retired from Stanford in 1972 but continued her interest in scholarship and in the work of her students and colleagues until her death.

Descriptive Entry

This collection documents the professional career of Angeline Myra Keen, mostly her years on the faculty of Stanford University. A paleontologist and malacologist, Keen's interests were diverse and included marine molluscan Cenozoic paleontology; neontology and zoogeography of western North America; and, especially, problems in systematics and nomenclature. Keen was also active in professional organizations and wrote extensively.

The greater part of the collection consists of professional correspondence and writing, and records of field trips undertaken to pursue her research. The collection also contains family correspondence and other material documenting her childhood, education, and genealogical interests, as well as philosophical and religious reflections on the human condition.

Series 2: PROFESSIONAL CORRESPONDENCE, 1935-1985 AND UNDATED ARRANGED ALPHABETICALLY.

This series consists of correspondence documenting the professional career of Angeline Myra Keen. Renowned as an expert in the nomenclature of mollusks, much of Keen's official correspondence consists of requests for identification of species from amateur collectors, and, as often, from colleagues in the field. Similarly, she was often sought as an editor for malacological journals such as *Veliger*, published by the American Malacological Union, and as a referee for nomenclatural disputes among fellow scientists. Included as well is correspondence regarding her position as professor and academic advisor at Stanford University, and collaborative efforts on publications such as the *Treatise on Invertebrate Paleontology* edited by Raymond C. Moore. Also included are photographs, the locations of which are noted in the folder listings.

Series 4: RESEARCH FILES, 1935-1984 AND UNDATED. ARRANGED ALPHABETICALLY BY SUBJECT.

This series consists of various subject files concerning research by Angeline Myra Keen in the fields of malacology and paleontology. During much of her tenure as a scientist, Keen worked to standardize the nomenclature and descriptions of mollusks, and she was a major contributor to the *Treatise on Invertebrate Paleontology*, edited by Raymond C. Moore. Many of her research files, therefore, reflect work for manuscripts published in the *Treatise*. Included are correspondence, loose and bound notes on nomenclature, anatomical drawings, annotated drafts of manuscripts, specimen photographs, slides, photomechanical reproductions, copies of articles, maps, and author's proofs.

Series 7: SCRAPBOOKS AND COLLECTED MATERIALS, 1924-1985 AND UNDATED. ARRANGED ALPHABETICALLY BY SUBJECT.

This series consists of scrapbooks and newspaper clippings collected and compiled by Angeline Myra Keen. Growing up in Colorado, Keen developed a curiosity about natural science and a great love of nature. She was an avid collector and a published photographer of small animals, birds, and insects in their natural environment. Her scrapbooks contain poems, newspaper and magazine clippings, prints, postcards, occasional correspondence, and photographs, much of which deal with the subject of nature. Keen was also a devout Christian, and her strong religious beliefs are reflected in several of the volumes, which are dedicated to poems and essays on faith. Also included are newspaper clippings and material relating to her work at Stanford, and folders containing loose items of interest to be bound at a later date.
